Class I: NTIIX

## Navigate Fixed Income with a Tactical Approach

Fixed Income markets offer a variety of opportunities, but they also present a number of unique challenges and risks. Clark Capital believes investors may benefit from a disciplined, quantitatively managed tactical asset allocation approach that actively pursues "risk-on" opportunities while guarding against undue risks.

### Deliver Total Return

**Goal:** Provide investors the potential for higher returns by identifying market leadership and constantly pursuing alpha.

The strategy utilizes a relative strength, momentum based approach to identify the leading fixed income sector(s).

### Reduce Portfolio Risk

**Goal:** Manage portfolio risk through the ability to shift to safer fixed income sectors when necessary.

The strategy seeks to minimize downside risk through its ability to shift out of investment grade corporate fixed income when needed and invest in higher quality debt and/or cash.

### Take a Tactical Approach

**Goal:** Utilize a quantitative and repeatable investment process that seeks to maintain a durable portfolio through various market cycles.

The strategy utilizes a tactical asset allocation policy that seeks to rotate among Investment Grade Corporate Fixed Income, U.S. Treasuries, and cash equivalents.

The Navigator<sup>®</sup> Tactical Investment Grade Bond Fund maintains exposure to investment grade corporate fixed income when positioned in a "risk-on" environment. When Clark Capital's quantitative research model indicates a "risk-off" environment, the portfolio shifts exposure to intermediate Treasuries and/or cash equivalent securities.

Target opportunities across fixed income asset classes:

A disciplined, quantitative process seeks to identify market leadership, constantly pursuing alpha while managing risk.

Objective:

The Fund seeks total return with a secondary goal of current income.

*The performance data quoted here represents past performance. Current performance may be lower or higher than the performance data quoted above. Past performance is no guarantee of future results. The investment return and principal value of an investment will fluctuate so that investor's shares, when redeemed, may be worth more or less than their original cost. Total return is calculated assuming reinvestment of all dividends. Total returns would have been lower had the Adviser, the Distributor, the Administrator, and Custodian not waived or reimbursed a portion of their fees. **non tax exempt risk, turnover risk, U.S. government securities risk. The Fund invests in exchange traded funds (ETFs), closed end funds and other mutual funds ("Underlying Funds"). Such Underlying Funds are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in the underlying funds and may be higher than other mutual funds that invest directly in stocks and bonds. Each of the Underlying Funds is subject to its own specific risks, but the sub-advisor expects the principal investments risks of such Underlying Funds will be similar to investing in the Fund.**

**Municipal bonds on one hand, and treasury bonds and LIBOR swaps or options or futures on treasury bonds on the other hand, may experience a lack of correlation. The Fund can be adversely affected by times where municipal interest rates rise and the Fund interest rate hedges decline in value. Even a small investment in derivatives (which include options, futures and swap contracts) may give rise to leverage risk, and can have a significant impact on the Fund's performance. Derivatives are also subject to credit risk and liquidity risk. When the Fund invests in fixed income securities, derivatives on fixed income securities, or underlying Funds that invest in fixed income securities, the value of the Fund will fluctuate with changes in interest rates. Defaults by fixed income issuers in which the Fund invests will also harm performance. Inflation-indexed securities, including Treasury Inflation-Protected Securities, decline in value when real interest rates rise. Interest rate changes may adversely affect the market value of an investment.**

**The Fund may employ leverage and may invest in leveraged instruments. Borrowing magnifies the potential for losses and exposes the Fund interest expenses on borrowing. Liquidity risk exists when particular**
